

This drawing of a meadowlark is one of the illustrations in Natural Features of the NCAR Site, a 20-page booklet published this week by the University Corporation for Atmospheric Research.

The booklet is in two parts. The first, which tells the geologic story of the mesa site, is by Halka and John Chronic. Halka is a writer-editor in the NCAR publications department, and John, her husband, is on the CU faculty. Both authors hold the doctorate in geology. The second part, on the biologic features of the site, is by Dr. Horace R. Simms, a biologist who spends his summers at Gold Hill and his winters teaching at Eastern Washington State College.

The booklet was put together by the people of Peter Rose's publications department and Bob Wyatt's illustration group. Bob Maurer, of the illustration group, designed the booklet.

The cost of publishing Natural Features of the NCAR Site was paid by UCAR from its corporate funds, and the corporation will be reimbursed by selling the booklet for 30¢ a copy. As the booklet is not an NCAR publication, no free distribution will be made to staff members. Copies may be purchased from the Mesa Laboratory receptionist late next week.

For several years, a major project in Ed Martell's isotope geophysics group has been development of a rocket-borne cryogenic sampler. This work, supported by a NASA contract, is aimed at developing a device for sampling the upper stratosphere and lower mesosphere for trace gases, aerosols, and dust. This week, the sampler had its first field test when it was launched on an Aerobee-150 rocket at White Sands. Ted Denton reports that the launch, sample collection, and recovery were all completely successful.

During construction of the Fleischmann building, the first section of the outer ring of the Mesa Laboratory parking area will be used as a staging area by the construction people. For safety reasons, this section will be closed to all traffic except construction and delivery vehicles. Staff members and visitors are asked to enter the parking area by turning right at the first entrance, and not to park in the first section of the outer ring until the Fleischmann building is finished.
